EXPERIENCE

Appfolio Inc.

Remote

Senior Software Engineer, Technical Lead, Payments

January 2023 - Present

- Technical lead for the Online Certified Funds At Move-in payments product built to grow online payment adoption across Appfolio's platform. Took it from an experiment to general availability, coordinating changes across six service teams and working directly with product, design, and support operations teams.
- Grew the product to 30% of all move-ins by owning the rollout and building the monitoring dashboards the team paced each stage on.
- Created an integration for a lending partner to offer rent installments directly to residents, and scaled it from a 15 customer pilot to 100% of Appfolio's customers. Built the bank account tokenization, queue-based sync, and APIs behind it.
- Built the payments foundation for a new resident portal, now the base for Appfolio's new products, and set the patterns three payments teams build on today.

Twitter Inc.

Remote

Software Engineer, Developer Productivity and Tools

July 2021 - January 2023

- Improved git status and git checkout performance by 88% and 96% through development of Focus.
- Designed and implemented branch management for Focus, so engineers could carry in-flight branches from the dense monorepo into a Focus repo and compose project definitions recursively.
- Led the company-wide git client upgrade from v2.25 to v2.35, improving git command performance by 10%, and operations support for the global git infrastructure.

Amazon Web Services

Seattle, WA

Software Development Engineer Intern

May 2020 - July 2020

- Designed and implemented Direct Lambdas, providing a default configuration for 90% of AppSync customers. Optimized GraphQL query handler to cut memory overhead and enhanced AppSync features in the AWS console.

EDUCATION

University of Central Florida

BS Computer Science

August 2018 - May 2021

SKILLS

Languages: Ruby, JavaScript, TypeScript, Python, SQL, Rust

Frameworks: Ruby on Rails, React, React Native, GraphQL
